

Water for Life

Wa...wa...wa..ter is the life blood of Gaia, the Earth and is the center of our birth
Water, we are sorry for taking you, and thus us, for granted
We have soiled you with air, aquatic, and terrestrial pollution
We have forgotten that our very own health depends on good water quality
and not just the health of all other life on Gaia, the Earth
Water provides us with her good and her bad in a balancing effort
Let us remember that water vapor is a greater greenhouse gas than all of the other greenhouse gases combined
Let us remember that we need the infiltration of cleaner water into the groundwater system
Let us remember that water is a vibrational energy like all other Life (all matter) throughout the Universe
Let us remember that water remembers (has memory), that water is alive, and that we should be formless, like water, as Bruce Lee suggested
And lastly I end with I love you water and thank you water
