

Date: 26 August 2021

Dear Brandon Wright,

My name is Irucka Embry & I am writing in response to the NWRA Press Release below concerning the global vaccination campaign\$:

[https://wasterecycling.org/press\\_releases/nwra-asks-cities-and-counties-to-encourage-worker-vaccinations/](https://wasterecycling.org/press_releases/nwra-asks-cities-and-counties-to-encourage-worker-vaccinations/)

NWRA Asks Cities and Counties to Encourage Worker Vaccinations, August 25, 2021

I am enclosing an excerpt of questions that I pose in a document entitled: COVID-19 Vaccination/Experimental Gene Therapy & What You Are Not Being Told (This is Just the “Tip of the Iceberg”) {<https://www.questionuniverse.com/vaccination.html>} to hopefully get the NWRA staff thinking critically about what yall are recommending with regards to the global, experimental gene therapy injections (commonly called “COVID-19 mRNA vaccines”):

- 1) Has any “health” authority in the world been successful at isolating the “SARS-CoV-2 virus” (“coronavirus”) from “patient-zero” in Wuhan, China? If not, then why not?
- 2) Was that isolated “virus” used in the production of the numerous “COVID-19” vaccines? If not, then why not? If not, then what genetic material, if any, is being used in the vaccines?
- 3) Do any of the United States Food & Drug Administration (FDA) Emergency Use Authorization (EUA) vaccination\$ contain genetically engineered components? If so, then which ones do? If so, then is this information provided to the general public as well as to the FDA? If it’s not being provided to both the general public and the FDA, then why not?
- 4) Do any of the United States Food & Drug Administration (FDA) Emergency Use Authorization (EUA) vaccination\$ contain nanotechnology, including, but not limited to, nanoparticles? If so, then which ones do? If so, then is this information provided to the general public as well as to the FDA? If it’s not being provided to both the general public and the FDA, then why not?
- 5) Within the United States of America (USA), what is the legal definition of a vaccine? Do any of the “COVID-19” Emergency Use Authorized (EUA) only vaccines meet the legal definition of a vaccine? If not, then why not? If not, then why are those products fraudulently labeled?

There are many inherent risks, including death, with all vaccinations from the time of Edward Jenner to the present-day, but much of this sordid history is not known by most people that administer or promote vaccines and/or have their bodies used in the experimentation called vaccinations. I ask that the staff responsible for recommending this current experimental gene therapy mis-labeled as a vaccine to review the resources at <https://www.questionuniverse.com/vaccination.html> so that they are better informed to revisit the decision that has already been made & hopefully choose to rescind the decision declared in the aforementioned Press Release. The experimental gene therapy that is currently promoted by those with and without a financial interest in the profit-making of the injections are and will cause more harm than good. This is already seen in the staggering number of adverse reactions, including deaths, reported all around the globe in the various databases.

I want to thank you in advance for your time and consideration.

Irucka Embry, E.I.T.
