

Date: 24 May 2021

Greetings.

- 1) Has the Metro Nashville Department of Health properly isolated the SARS-COV-2 virus directly from a sample taken from a COVID-19-diseased patient where the patient sample was not first combined with any other source of genetic material (i.e. monkey kidney cells aka vero cells, liver cancer cells, etc.)?

Please note that I am using “isolation” in the everyday sense of the word: the act of separating a thing(s) from everything else. I am not referring to the “isolation of SAR-COV-2” as it relates to:

- the culturing of something,
- the performance of an amplification test (i.e. a [RT-]PCR test), or
- the sequencing of something.

I am asking, if the Metro Nashville Department of Health has properly isolated the SARS-COV-2 virus which was also present in “patient zero” in Wuhan, China?

If so, then how was this confirmation achieved? Does the Metro Nashville Department of Health have a sample of the isolated SARS-COV-2 virus from “patient zero” in Wuhan, China? If not, then what was used for this confirmation?

Essentially, I am trying to determine if Postulate 2 of Robert Koch’s Postulates has been satisfied. Below I am enclosing his 4 postulates:

- The germ must be found in all cases of the disease.
 - The germ must be isolated from the host and grown in pure culture.
 - The purified germ must cause the disease again in another host.
 - The germ must then be isolated from the newly infected host.
- 2) Please provide the names of studies that indisputably show that SAR-COV-2 virus has been proven to exist (complete purification, isolation and definition of biochemical properties plus electron micrograph).
 - 3) Please provide the names of studies that indisputably show that the afore-mentioned virus causes a disease called COVID-19 (and also that other factors like malnutrition, toxins, etc. do not at least co-determine the course of disease). Please note that industrial poisons, various drugs (such as antipsychotics, opioid analgesics, anticholinergics, and/or antidepressants) may be a cause of respiratory diseases, such as pneumonia and thus also COVID-19.
 - 4) Please provide the names of at least two studies that indisputably show that vaccinations are completely safe and effective.

I want to thank you in advance.

Irucka Embry
